848 Material Safety Data Sheet

Functional Group ID=MS

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Material Safety Data Sheet Transaction Set (848) for use within an Electronic Data Interchange (EDI) environment. The transaction set can be used to communicate chemical characteristics, hazards, and precautions for the safe handling and use of a material. The transaction set is intended to convey the information required for a Material Safety Data Sheet (MSDS) as defined by the Occupational Safety and Health Administration (OSHA) Hazard Communication Standard, 29 CFR 1910.1200 in the United States, and Workplace Hazardous Materials Information System (WHIMS) in Canada, and various state, province, and local requirements under right-to-know legislation.The MSDS provides the receiver with detailed information concerning material identity, emergency response, chemical and physical characteristics, toxicology, and industrial hygiene procedures.State and federal law dictate who is obligated to provide the MSDS and to whom it should be issued. In addition, third-party providers or others with no statutory obligation may voluntarily provide an MSDS to anyone.This transaction set allows for transmission of MSDS data in a structured, unstructured, or semi-structured form.CAUTION: With this transaction set, text format is critical due to the MSDS's primary role as a vehicle for hazards communication. The risk if this information is not transmitted clearly and accurately could be harmful to human life, harmful to the environment, could cause mishandling of product, could result in regulatory non-compliance, and could result in liability.Trading partners need to agree on how to interpret, store, and display/print MSDS text, especially text contained in the MSG and SD1 segments. For example, a sender may wish to format text so that one print line is mapped to one MSG segment. Segment terminator and data element delimiter characters shall not appear in any MSDS data.WARNING: Alteration of the original document will occur if the EDI translator or application software converts characters to uppercase. This may adversely affect the appearance, effectiveness, clarity, readability, and communicability of the printed MSDS document.

Notes:

1. This implementation convention provides the fully unstructured format for submission of a "text like" Material Safety Data Sheet (MSDS). The Federal Government seeks to maximize the use of the structured convention where possible.

2. This data requirement conforms with the Chemical Manufacturer's Association ANSI standard for MSDS preparation (ANSI Z400.1) and provides for hazard communication (HAZCOM) warning label information. Non ANSI Z400.1 format MSDS can also be accommodated within this structure, but suppliers should ensure the format used preserves data clarity and readability.

3. Strict version control of each MSDS for unique products and formulations is required. The primary method for MSDS identification is through a linkage between a unique MSDS reference number, a revision number if applicable, a manufacturer's part number, a CAGE (commercial and government entity), and MSDS effective date. Priority should be given to this data when identifying a unique product.

4. Send only one MSDS per transaction.

5. For any section where information is not available or not applicable, cite the section heading and provide an indicative message such as, for example, "Not Available."

Transaction Set Notes

1. LIN loop is product level. MSS is section level. The first SD1 loop is safety data relating to the section only. The first CID loop is for complex measurements on safety data. LX loop is used to specify product characteristics, components, or complex measurements (i.e., those with environmental parameters). The second SD1 loop is safety data relating to a particular product characteristic or component. The second CID loop is for complex measurements on safety data, which related to a particular product characteristic or component.

2. Regulation notifications can be contained in MSS or SD1 or both.

3. Trading partners must agree on a convention for text processing that will not split words, and which can convey correct meaning, in successive SD1 or MSG segments.

4. Regulation notifications can be contained in MSS or SD1 or both.

5. Trading partners must agree on a convention for text processing that will not split words, and which can convey correct meaning, in successive SD1 or MSG segments.

6. The number of line items (CTT01) is the accumulation of the number of LIN segments. Hash total (CTT02) is not used in this transaction set.

	14	If either LIN30 or LIN31 is present, then the other is required.
Semantic Notes:	1	LIN01 is the line item identification
Comments:	1	See the Data Dictionary for a complete list of ID's.
	2	LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Notes:

1. Use only the 2/LIN/010 segment in cancellation transactions to identify the material associated with the canceled MSDS.

2. Use all additional necessary segments in the 2/LIN/010 loop in original and replacement transactions to identify the specific MSDS content.

3. Use data element 235/234 pairs to identify data pertinent to the transaction. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

4. The most desirable means of item identification is manufacturer's part number and CAGE Code. However, MSDS submitters may use other authorized coding alternatives to identify the material for which the MSDS is prepared. This information will be used in conjunction with an MSDS reference number, MSDS revision number, and MSDS effective date to uniquely identify any individual MSDS.

5. Manufacturers should use one 235/234 pair to identify the product by manufacturer's part number (Code MG) and immediately follow with another

> *235/234 pair identifying the associated manufacturer CAGE Code (Code ZB).*
>
> *6. Distributors and repackagers should use one 235/234 pair to identify the product by vendor's part number (Code VP) and follow immediately with a 235/234 pair identifying the associated distributor or repackagers CAGE Code (Code ZB). Distributors and repackagers should then use two additional 235/234 pairs to identify the product manufacturer's part number (Code MG) and CAGE Code (Code ZB), if known.*
>
> *7. Suppliers should identify the product by manufacturer's part number (Code MG) in one 235/234 pair and follow immediately with a 235/234 pair identifying the associated manufacturer CAGE Code (Code ZB).*
>
> *8. All submitters shall provide the National Stock Number (NSN), if known, but NOT as a substitute for part number and CAGE Code. The use of code FS may be repeated in successive 235/234 pairs to identify multiple NSN's corresponding to the product.*
>
> *9. Provide other identifying information, as required, to adequately identify the material for which the MSDS applies.*
